

About This Book

A no-hype, evidence-based investing manual.

Across 24 chapters and 302 entries, every action states three things clearly:

- What it costs (fees, taxes, time, effort, permanent loss of capital)
- What it returns (long-term real returns, lower volatility, tax savings, avoiding wipeouts)
- How strong the evidence is (A = authoritative statistics & official documents; B = single studies & institutional reports; C = reasonable inference & regulation).

Sources cite only peer-reviewed papers and official filings - never self-media or marketing accounts.

- The 'Three-Zero Principle': do first the moves that cost zero money, zero time, and zero willpower.
- Every entry shows its original source; check the A/B/C evidence yourself.
- Taxes, ETFs, IPOs, and fund screening tuned for practical investors.
- Independently authored - no product recommendations or affiliate links.
